

COOLING

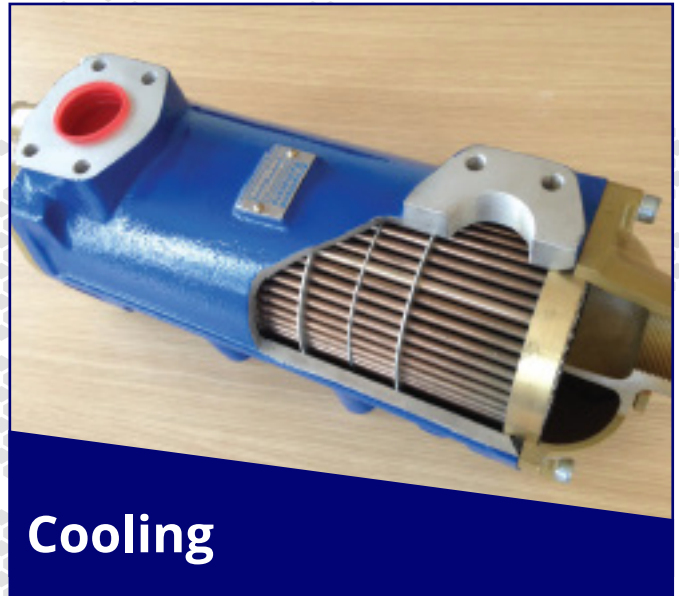

SHELL AND TUBE HEAT EXCHANGERS

Heat Exchangers intended for cooling a variety of process fluids including hydraulic oil, compressor oil, lube oil and more.

CERTIFICATION

All units are validated with industry leading design programmes to ensure your bespoke package meets the application requirements

FEATURES & BENEFITS

- ✓ Cooling packages designed to customer specific requirements
- ✓ Variety of manufacturing materials available - materials used matched to application
- ✓ Able to configure to single pass, 2 pass or 3 pass depending on application
- ✓ Meets the ATEX Zone 2 requirements for use in potentially explosive atmospheres

GLOBAL SUPPORT

Broadland Radiators are in operation around the world, and are fully supported by a network of strategic partners

PRODUCT SUPPORT

We work with our customers to ensure they get the product they require and often incorporate customer specific requirements in our designs.

ABOUT BROADLAND RADIATORS

Broadland Radiators design, build, manufacture and repair a wide range of cooling systems, radiators and heat exchangers. We have over 50 years' experience in developing bespoke cooling solutions designed to work with your equipment and application.

QUALITY

We ensure quality at every step in the process.

All units receive 100% final product inspection and test at our ISO9001:2008 certified production facility.
